WEB DEVELOPMENT

Back end: PHP, Laravel, MySQL, PostgreSQL (Supabase)
Front end: HTML, CSS, JavaScript, TypeScript, React, Next.js
Styling: Bootstrap 5, Tailwind CSS
CMS: WordPress, Elementor, WooCommerce, Shopify (Liquid)
Design: Figma (Auto layout, spec values)

DATA

SQL: joins, CTEs, window functions
Reports: Power BI, Excel, Google Sheets, Looker Studio
Analytics: GA4, Search Console
Python: basic data scripts

TOOLS

Git and GitHub, VS Code
XAMPP, phpMyAdmin, LocalWP
Netlify, GitHub Pages
Jira, Trello
Systeme.io, n8n, webhooks

ALSO

Good written and spoken English
5 years working remotely
Careful with details
Picks up new tools quickly

MAYJHON V. GABUNADA

Web Developer | Data Analyst

ABOUT ME

I'm an entry-level web developer and data analyst from Cebu. I build web apps with PHP/MySQL, Laravel, and Next.js, and I turn data into dashboards with SQL, Power BI, and Excel. I can also turn a Figma design into a WordPress page with Elementor. Most of my projects are live or on GitHub. Before this, I spent five years as a Data Encoder for U.S. clients, which taught me to be careful with details and to work well on my own from home. I'm looking for a junior role where I can learn from a team and help out from the start.

PROJECTS

Mini CMS Workflow | *PHP, MySQL, Bootstrap* — github.com/mgabunad/mini-cms-workflow
- Multi-client content system in plain PHP: roles and permissions in the database, a draft-to-published approval flow, and invoicing.

Lead Automation Workflow | *Systeme.io, Webhooks, CRM Pipeline* — github.com/mgabunad/lead-automation-workflow
- Form-to-CRM automation: tags each signup, adds it to a pipeline stage, and sends a JSON webhook (practice build).

Lead Intake Automation (n8n) | *n8n, Webhooks, Google Sheets, Gmail* — github.com/mgabunad/n8n-lead-intake
- Webhook-triggered workflow: a lead comes in, the fields are cleaned and timestamped, the lead is added to a Google Sheet, and an email notification is sent through Gmail (practice project).

EU261 / UK261 Flight Compensation Checker | *Laravel, MySQL, Bootstrap 5* — github.com/mgabunad/eu261-checker
- Checks whether a delayed, cancelled, or overbooked flight qualifies for compensation and explains each step. Rules are stored in MySQL tables, with 36 automated tests.

EU261 Checker: Next.js Frontend | *Next.js, React, TypeScript, Tailwind* — github.com/mgabunad/eu261-web
- Frontend for the EU261 API: form options load from Laravel, and the result shows each rule step (practice project).

Apartment Finder | *Next.js, TypeScript, Supabase* — apartment-finder-mgabunad.netlify.app
- Bilingual rental site with search filters, an apply form saved to PostgreSQL, and a password-protected admin page; deployed on Netlify.

Task Management App | *Laravel, Breeze, MySQL, Tailwind* — github.com/mgabunad/task-management-app
- A team task manager with Admin and Member roles, projects, task assignment, and To Do / In Progress / Done status tracking.

Shopify and WordPress Stores | *Shopify, Liquid, WooCommerce* — github.com/mgabunad/shopify-custom-sections
- Two Shopify stores with custom Liquid sections (variant selectors, live prices, sold-out states), plus a WooCommerce gadget shop.

Local Business Websites | *HTML, CSS, Responsive* — mgabunad.github.io/plumber-demo
- A demo plumbing business site with a quote request form, and a concept landing page for a burger cafe (Cafe Mafia).

Data Analytics Projects | *SQL, Power BI, Excel* — github.com/mgabunad/data-analytics-projects
- SQL case studies (GreenBasket retail, MetroMart, hospital records) using JOINs, CTEs, and window functions, with a written summary report.
- Power BI dashboard with DAX measures, calculated columns, and Power Query transformations, plus Excel dashboard and data-cleaning exercises.

DPWH Flood Control Dashboard | *Chart.js, Excel* — mgabunad.github.io/data-analytics-projects
- Turned a government Excel file into a 7-page dashboard with cross-page filters, sortable tables, KPI cards, and a timeline.

Portfolio Traffic Tracking | *GA4, Search Console, Looker Studio*
- Added GA4 tracking, a sitemap, and Search Console to my portfolio, plus a live traffic dashboard.

Figma to Elementor: Hero Section | *Figma, Elementor, WordPress* — github.com/mgabunad/figma-to-elementor
- Designed a hero section in Figma with Auto layout, then rebuilt it in Elementor, matching the 24 px gap, 64 px padding, Inter type scale, and button style from the spec.

Elementor Practice | *Elementor, WordPress, Responsive* — github.com/mgabunad/elementor-practice
- Responsive hero section built in Elementor, with separate desktop and mobile settings (practice project).

WORK EXPERIENCE

Data Encoder (Work from Home) | *Health Care Solutions Team* — 2020 – 2023
- Encoded and organized records for U.S. clients every day, working from home with little supervision.
- Kept my accuracy high on large volumes of data and flagged records that didn't look right.

Data Encoder | *Callvation* — 2017 – 2019
- Encoded and checked client records while meeting daily targets.

EDUCATION AND TRAINING

Full Stack Web Development | *CIIT College, Cebu* — Graduated
- Front end, back end, JavaScript/jQuery, REST APIs, and Laravel.

Full Stack Data Analyst Training | *ExcelHelpline.ph* — 2026, 3 months
- Data analysis, SQL/MySQL, Excel, Power BI, and Python.

BS Industrial Engineering | *CIT University* — 2011 – 2016

CERTIFICATIONS

- Certified Professional Data Analyst (CPDA), ExcelHelpline, Aug 2026
- Python Programming Level 3, ExcelHelpline, Aug 2026
- Data Analytics Level 2: MySQL, ExcelHelpline, Jul 2026
- Data Analytics Level 1: Excel and Power BI, ExcelHelpline, Jun 2026
- Full Stack Web Development, CIIT College, Cebu
